BEST PRACTICES

GENERAL INFORMATION

Recommendations for blending a challenging aluminium effect colour in to an adjacent part with DeBeer Refinish 900⁺ Series. Blending high covering effect colours with a greater than 60% of aluminium toner content can be a challenge. Especially when blending these colours in a spot repair or into the adjacent panel depending on the type of colour. To help with blending we now have two formulas on the ICRIS system.

When viewing the formula screen, the formula *without* the (Blending) box ticked will give fast full coverage.

When viewing the formula screen, the formula *with* the (Blending) box ticked provides an altered formula for less coverage and better blending qualities.

Clean with 1-951 Silicone Remover

and/or 9-851 WaterBase 900⁺ Series Degreaser.

Cleaning

RECOMMEND PROCESS TO FOLLOW INVISIBLE EFFECT COLOUR BLENDING

PREPARATION

Colour check

Always determine the right colour and/or colour variant. This should be done at the earliest stage possible, preferably when estimation of the repair is done. Creating a spray-out at this stage is best practice.

Protection

Use suitable respiratory protection (fresh air supply respirator is strongly recommended).
