

Q 80-175

High Gloss Anti-Hologramm Polish

Characteristics

80-175 is the latest generation of machine micro polishes for removing holograms, micro scratches and grinding marks up to 3000 grit. Suitable for all paint systems. The use of highly specialized, extremely homogeneous fillers creates a brilliant and permanent high gloss, even under extreme lighting conditions and with dark and similarly sensitive color tones. Holograms and micro-scratches are removed mechanically and not simply covered, which is often the case. 80-175 is extremely economical, easy to polish and removes without leaving any residue.

Application

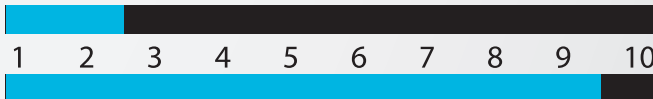

cleaning

shake well for
2 min

Cut

Gloss

In order to achieve optimal results, we recommend using the foam pad 80-273, ideally in combination with a 12mm orbital polisher. Apply 80-175 evenly on the surface to be treated and then polish crosswise with a little pressure until a transparent film appears, that is until the aluminum oxide in the polish has completely broken up. Then create the degree of gloss with less pressure and medium rotation. Do not use soiled pads, including pads that have been used with other products. Finally wipe with the microfibre cloth 60-200. Shake before use. Protect from frost and excessive heat. Do not use on hot surfaces.

Storage

Store the product in a ventilated place. Keep away from direct exposure to sunlight. Keep between +5°C and 20°C.

Safety

For more informations check the safety data sheet.
